

## Pages - Edit Text from Readiris

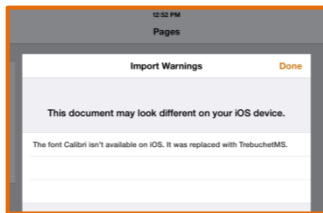

### SEA RCCDSB Training Manual

*(Instructions based on the Apps Version as of January 2014  
and prior to the release of iOS 7)*

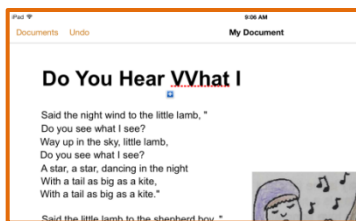

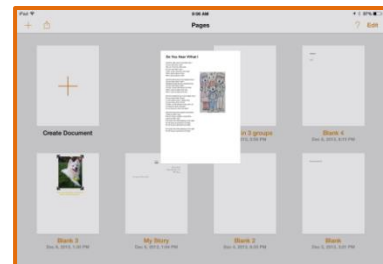

Documents from Readiris can be shared into the Pages App as "DOCX full layout." With this you will be able to edit the text within the zones created from Readiris.

After Sharing and Export from Readiris and selecting Open in Pages the exporting from Readiris to Pages begins.

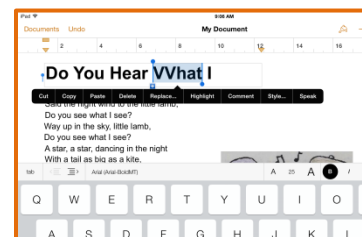

A warning you may receive can be about fonts that have been substituted by Pages. There are no options the font is automatically substituted, select Done.

The imported document will be in the documents folder of Pages. Select the document that has just been imported and it will open in Pages.

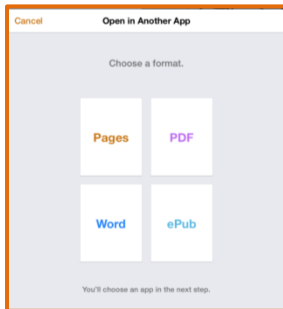

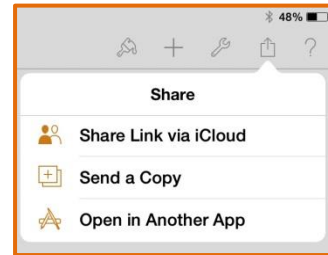

In this example the iPad has identified that "What" is spelled incorrectly. What had been recognized by Readiris recognized the "W" as "VV."

The text from the Readiris zones are now editable text boxes editable by Pages. Tapping once selects the text box. To select a word tap twice with holding on the second tap. Once highlighted word corrections can be made.

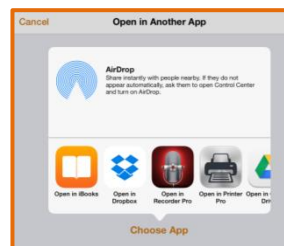

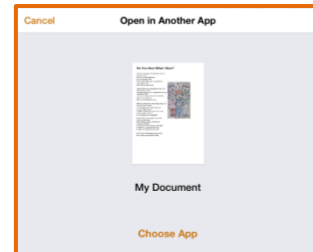

## Sharing to iBooks

Once completed editing tap on the Share button and Open in Another App.

When prompted to choose a format select PDF.

After processing you will be prompted to Choose App, tap on Choose App.

Select Open in iBooks

Document will now be opened in iBooks.
